

A Collaborative Approach to Global Biosafety

A Germfree and IFBA Partnership

The International Federation of Biosafety Associations is pleased to announce its multifaceted collaboration with Germfree Laboratories Inc. to address human and engineered determinants of sustainable biosafety systems and strategies.

Addressing the human component of biosafety policy design and implementation aims to improve sustainability and universalization of best practices around the world. Promotion of diversity, equity, and inclusion, mentorship, and Professional Certification contribute to a competent and collaborative biosafety workforce.

Many biosafety systems and strategies would not be possible without biocontainment facilities and other engineered controls. Private sector stakeholders are significant contributors to the advancement of these technologies, where their impact contributes to biosafety capacity-building and promoting a culture of biosafety across sectors.
